Android

Christel House South Africa Challenge:

With the sudden need to adjust to remote learning due to the arrival of the COVID-19 pandemic, our primary concern was to ensure that students were able to continue learning safely from home. This required access to mobile data, to safe online learning environments - there were a number of challenges to overcome.

The Solution

After just implementing some of the key features of Mobile Guardian, we were able to really narrow down the way our learners work, as well as control, from an IT perspective, where they can go online, what they can do, what they are not allowed to do.

Our Report Card

Mobile Guardian had us set up in less than a week!

When we approached Mobile Guardian initially, we were so impressed. Mobile Guardian set us up within the week we contacted them and their onboarding process taught us so much about the do's & don'ts and how the solution will affect us moving forward.

We found a stolen device using Mobile Guardian's Location Tracking

There was an incident where a device was stolen out of a student's home. The student contacted us within an hour and a half of the event and I was able to load data on the device's swim card and ping it to pinpoint its exact location. The police were informed of its location and were able to track an device and retrieve it within 6 hours of the theft of the device.

Adjusting our device management strategy

We acquired Android tablets to complement our digital learning environment and were on a 3-year path to implement devices into pen and paper classrooms. However, with the arrival of COVID-19 in South Africa, our school was forced to fast track the implementation of digital classrooms and change to remote learning - almost immediately. We would never have managed to do so without Mobile Guardian on hand to assist us.

Our Report Card

“Mobile Guardian offers educators fantastic manoeuvrability. Other mobile device management software we’ve used didn’t allow us to adjust the web filter for all devices en masse and lacked the meticulous reporting provided by Mobile Guardian”
